Officials from Comm Min, DCGI's office meet MHRA officials in Delhi

Suja Nair Shirodkar, Mumbai

WITH a view to ensure better understanding of the regulatory requirements in the UK, representatives from the commerce and health ministry along with top regulatory officials from the Drug Controller General of India's (DCGI'S) office recently met with the global chief of Medicines and Healthcare products Regulatory Agency (MHRA) for the first time in New Delhi. The meeting focused on exploring newer avenues and strengthening its relation with the UK based regulatory body that is responsible to regulate and overlook quality and efficacy of medicines that circulates within the country.

It is understood that India has been working very closely with the UK government from last six months to bring the regula-

tors and officials from the trade commission for the much anticipated meeting aimed at exploring better trade relations with UK. At present, UK holds the position of being the second largest export destination for the Indian pharma products and this initiative is seen as a much needed step taken by the Indian government to push for better exports of the pharma products to the UK.

The meeting focused on exploring close collaborative efforts between the MHRA and the office of the DCGI to address key issues and challenges that is being faced by the Indian exporters. Dr P V Appaji, director general of Pharmaceuticals Export Promotion Council of India (Pharmexcil) informed that the council will be playing a key role in addressing all the export related issues by providing all the required data on Indian companies to the interested UK based companies for their assistance. ◆

Tiny Particles Big Results

Microfluidizer® high shear fluid processors are the gold standard in nano-enabled applications for uniform particle size reduction, cell disruption and bottom-up nanoparticle creation - with scaleup guaranteed.

Discover why 17 of the top 20 global pharmaceutical companies innovate with Microfluidics technology.

Benefits of Microfluidizer:

- ◆ High shear -particle size reduction and uniform size distribution
- ◆ Rapid cell rupturing-Hard on Cells Gentle on Proteins
- ◆ Ease of use, Low Maintenance
- ◆ Simple cleaning process
- ◆ Effective product cooling
- ◆ Small sample volumes

Advanced Enzymes gets award for export category

Our Bureau, Mumbai

ANAND Sharma, minister of commerce, industry & textile, Government of India imparted the honour of first runner-up for the category of most innovative exporter at the 'ECGC - D&B Indian Exporters' Excellence Awards 2012'

organized by Dun & Bradstreet Information Services India Pvt Ltd recently at Mumbai. Sandeep Bijamwar, business head - API, Advanced Enzymes Technologies Limited (AETL) represented the company to receive the award.

C.L. Rathi, Managing Director of AETL, said with a sense of pride "A very proud moment for all of us at Advanced

Enzymes since the company is being honoured with such a prestigious award for export category. This award truly recognizes AETL's great contribution in the field of Indian

exports and reaching customers with customized solutions." In AETL, enzymes are produced using modern biotechnology and serve as a bio-chemical energy source to create high quality end products. Presently AETL is exporting its products to over 40 countries and is the largest enzyme producer-exporter since its inception in 1989. It is also ranked amongst top 10 enzyme producers in the world." ◆
